

The ERP software that will grow with your business

Eyesel Business Suite (EBS) is designed to help your business gain a competitive advantage in your industry.

Developed on the powerful Microsoft SQL technology and based on the best business practices, you will find that EBS is a flexible, user-friendly and functionality rich ERP system.

EBS is fully integrated and incorporates all standard ERP and financial areas, as well as industry-specific functions.

Amongst standard functionality, in EBS you will find an advanced purchase order processing module with full consignment tracking, costing, goods receipts as well as quality control processes, full batch and expiry date traceability; integrated waste management; warehouse and

barcode driven stock management; sales force automation and full sales and distribution control processing with subsequent truck and load reconciliations; return merchandise authorization (RMA) and more.

Continuous investment in functionality, coupled with new technology make EBS a dynamic product that enables your business to adapt to changes, expand and keep you ahead of your competition. It also helps reduce administrative costs and ensures full return on investment within a short period.

In addition, EBS is backed up with a full range of services including consultancy and project management, implementation and training, lifetime system support and maintenance.
