

<b>Job Title</b>	Software Engineer
<b>Reports To</b>	Manager / Team Leader

### Who Are we?

Founded in 1994, our mission @ Information Systems Limited is to provide the most comprehensive, cost effective and innovative business software solutions through a cooperation of expertise and knowledge.

We are committed to deliver the highest level of value to our customers and to provide a dynamic and challenging environment for all our employees. The group now employs over 65 professionals, and services over 600 customers both locally and overseas and is ISO 9001:2015 certified.

### Job Purpose

The **Autoline Dealer Management System (DMS)** is the premier business solution for the retail automotive industry and endorsed by all leading manufacturers.

- Forming part of a young and dynamic technical team you will be expected to produce and maintain best quality software using the latest technology while also assisting the software development manager / team leader in scheduling and allocating resources.
- While predominantly a programming position, elements of testing, implementation & system design using well established standards and procedures will also form part of your day-to-day activities.

### Duties & Responsibilities

- Hands-on Development and maintenance of bespoke software development & country specific solutions
- DMS systems deployment and technical support/debugging
- Assist in System upgrades and patching.
- Application and setup of Automotive Manufacturer interfaces
- The Development of customer/Country specific programs and reports.
- The Implementation of Print Manager Solutions.
- Perform effective technical analysis and 2<sup>nd</sup> line of support
- Handling of Projects technical support.
- Building an area of advanced competences in selected areas of DMS

### Qualifications

- A first degree or equivalent in software development.
- A fundamental knowledge of databases such as ISAM, ORACLE, MSSQL would be considered an asset.
- Good knowledge of VB, C/C++, Web Services, XML, SOAP.
- Server administration techniques of NT/Linux based platforms will be considered an asset.

### Working Conditions

- At times the nature of the job may be somewhat demanding due to the issues needing resolution in the shortest time possible to maintain client satisfaction always.

### Physical Requirements

- Since the job consists of office related work, there are no particular physical requirements.

### Other Requirements

- On the job training would be provided as and when required. Training may be carried out internally, locally, or overseas. Ongoing training and a structured appraisal system ensure people can grow professionally.
- With our clientele being local as well as international, you would be expected to have an excellent command of spoken and written English. Fluency in a 2<sup>nd</sup> language such as French and/or Arabic would be considered an asset.
- You will be working on systems that interface and integrate with the automotive industry players such as : KIA, Mercedes , Toyota , Honda , Ferrari , Hyundai , Jaguar, VW, Porsche , BMW , Lamborghini....
- The very real opportunity of overseas travel and exposure to world class systems.
- We offer careers not jobs.
- The opportunity to learn the business processes involved.
- Salary will commensurate with experience, expertise and knowledge.
